FOR IMMEDIATE RELEASESM

EZCheck Introduces New Products to Complete Product Set
*New recurring payments and checks by phone services give
partners new markets to target*

HOUSTON, June 21, 2005 – EZCheck[®] Check Services, Inc., a leading check conversion and authorization company, announced today that it has introduced two new products that round out its suite of electronic check services and provide ISO partners a way to tap into new markets and improve revenues.

EZCheck's latest product additions offer solutions geared to meet specific industry needs and will help ISO partners open the door to new customers.

EZDebit,SM enables businesses that process recurring payments the ability to automatically initiate an electronic transaction that debit's a customer's checking account each time a payment is due. . The service can electronically process a variety of payment types including monthly service fees, payment plans, subscription and membership fees, in a broad range of industry applications including mortgage, insurance, health club, home services, etc. A web-based interface controls the timing of customer payments that can be scheduled with any frequency, and in any amount, up to a year in advance – improving efficiency, funds availability and collection rates.

EZTel,SM allows companies that take orders by phone the ability to offer their customers the option of paying by check. EZTel can benefit a wide variety of businesses including mail order, telephone order, catalogue companies, and as an alternative to web sites, whose customers are unsure of processing payments over the Internet. This offering also uses a web interface that provides check authorization and funds settlement in real-time – a process that greatly streamlines operations, improves customer satisfaction and cash flow.

“The real benefit of these new products is their ability to transcend the reach of traditional electronic check products into new markets that are not already saturated with payment services,” said Randy Rutledge, president and chief executive officer of EZCheck. “For example, the insurance industry could use EZTel to immediately insure an individual calling in for coverage and then, continue to process their recurring monthly premium using EZDebit. This is just one application, the potential for these two products, is virtually unlimited,” he added.

- M O R E -

The number of transactions processed for recurring payments and telephone orders exceeds 2.38 billion transactions annually and represents \$2.3 trillion. With the number of transactions being processed and the growth of these types of payments, EZDebit and EZTel have the potential to bring tremendous advantages to the businesses that employ them. Because all payments are processed electronically, businesses not only financially benefit from improved funds availability, higher collection rates and lower deposit/return check fees, but also benefit from improved employee productivity, higher levels of customer retention and satisfaction as well as the potential to improve sales and increase revenues.

About EZCheck

EZCheck is a leading information and payment services company serving thousands of businesses nationwide in a wide variety of industries. As one of the initial pioneers in electronic check conversion at the retail point-of-sale, EZCheck has leveraged its advanced technology and systems to expand its product line into adjacent markets including accounts receivable conversion, recurring payments and checks by phone services. In addition, EZCheck provides a complete line of check guarantee, check verification and collection services to the business community and is ranked among the top providers of check services in the country. EZCheck is dedicated to providing unsurpassed value and service to its customers. The company markets through a national network of independent sales organizations and supports operations from its headquarters in Houston, TX.
