

Electronic Check Conversion from **EZCheck**

The Safe and Secure Process that Streamlines Operations - Electronic Check Conversion (ECT)

The EZCheck® Electronic Check Transfer (ECT) program combines the benefits of paper checks with the speed, ease and safety of electronic processing. It's just like accepting a credit card or debit card at the point-of-sale. The check is converted to a paperless transaction by electronically moving funds from the customer's bank account to the business's bank account. Combined with Check Guarantee, this service delivers a streamlined check acceptance process that eliminates returned checks and returned check fees, while reducing paperwork and trips to the bank.

With the EZCheck ECT program, check writers will continue to benefit from the float of a paper check, since the electronic item is processed through the banking cycle in the same amount of time as a traditional paper check. It's a safe process that uses a secure bank system similar to those used for direct deposits and ATM transactions.

The EZCheck ECT program helps businesses take full advantage of this new innovation in the world of electronic commerce and provides the added safety and convenience of paperless money. Determine the program that best meets your business needs [ECT](#) or [ECTPlus](#).
